

# Earth & Environmental Science (EES)

## Courses

### **EES 002 (EVST 002) Introduction to Environmental Science 3 Credits**

Focuses on natural and human-induced drivers and consequences of environmental change. Exploring options for mitigating and adapting to environmental change in ecosystems, physical and social systems, the course examines such topics as biogeochemical cycles, population pressure, ecosystem diversity, productivity and food security, energy, water resources, climate change, pollution, ozone, urban issues and sustainability. Stresses interactions using case studies. Intended for any student with an interest in the environment. May be combined with EES 022 or EES 004 for 4 credits.

**Attribute/Distribution:** CC, NS, NW

### **EES 004 The Science of Environmental Issues 1 Credit**

Analysis of current environmental issues from a scientific perspective. The focus on the course will be weekly discussions based on assigned readings. May be combined with other EES 3 credit courses for 4 credits.

**Attribute/Distribution:** NS, NW, Q

### **EES 014 Lands of the Midnight Sun 3 Credits**

Investigations of polar exploration and science, the environment at high latitudes, and cultures of the Arctic, as well as discussion of issues related to understanding interactions among extreme environments, global change, pollution, and indigenous cultures. Lecture, discussion, classroom activities. May be combined with EES 022 or EES 004 for 4 credits.

**Attribute/Distribution:** CC, NS, NW

### **EES 015 Volcanoes and the Ring of Fire 3 Credits**

Volcanoes are a tangible, often breathtaking, reminder of the inner workings of our restless planet. In this course, we consider the processes leading to volcanic eruptions, the significance of volcanism for long-term Earth evolution, and the hazards volcanoes create for humans, particularly those living in the circum-Pacific (the Ring of Fire). May be combined with EES 022 or EES 004 for 4 credits.

**Attribute/Distribution:** CC, NS, NW

### **EES 016 Geology of War 3 Credits**

Introduction to Earth and Environmental Sciences through a study of the resource and environmental change causes of human conflict. Earth and Environmental Science basis for permanent and contingent operating factors during war. Instructional format includes lectures, discussions, student projects, and a field trip to Gettysburg National Military Park. May be combined with EES 022 or EES 004 for 4 credits.

**Attribute/Distribution:** CC, NS, NW

### **EES 021 Dynamic Earth 3 Credits**

Processes within the Earth and dynamic interactions between the solid earth, the atmosphere, and the oceans. Lectures. May be combined with EES 022 or EES 004.

**Attribute/Distribution:** CC, NS, NW

### **EES 022 Exploring Earth: A Natural Science Laboratory Course 1 Credit**

Earth is a dynamic planet. Building on the framework of the "Earth Science Literacy Initiative" this laboratory course explores how Earth systems influence our lives, and in turn how our lives impact Earth systems. Topics include deep time, complex systems, continuous change, land use, biodiversity, resources, hazards, climate change, and sustainability. Students gain experience in exploration and discovery, quantitative reasoning, objective evidence based decision making, communication, critical thinking, and creativity.

**Attribute/Distribution:** LS, NS, NW, Q

### **EES 023 Weather and Climate: Past, Present, and Future 3 Credits**

Introduction to the basic principles of meteorology, as they pertain to past, present, and future climates. Earth's energy balance; cloud formation and precipitation; winds and atmospheric circulation; regional climatologies; past warm periods and ice ages in Earth's history; the latest ideas about future climate change and global warming. Students will maintain a weather notebook to enable them to relate theory to observations from real weather data. May be combined with EES 022 or EES 004 for 4 credits.

**Attribute/Distribution:** CC, NS, NW

### **EES 024 Earth's Climate from the Dinosaurs to the Day After Tomorrow 3 Credits**

Examination of Earth's past, present, and future climate. Introduction to the components of Earth's climate system and how they interact with one another. Exploration of changes in Earth's climate from today all the way back to when the dinosaurs roamed the Earth. Application of knowledge about past climates in evaluating humanity's role in modern and future climate change. May be combined with EES 022 or EES 004 for 4 credits.

**Attribute/Distribution:** CC, NS, NW

### **EES 025 Observing and Studying Nature 3 Credits**

Introduction to the basics of studying nature, focusing on regional biodiversity. This course will familiarize participants with the common plants and animals in the Lehigh Valley and provide tools to interact with natural ecosystems and conserve biodiversity. A combination of lectures, classroom discussion, and outdoor activities. May be combined with EES 022 or EES 004 for 4 credits.

**Attribute/Distribution:** CC, NS, NW

### **EES 026 Energy – Origins, Impacts, and Options 3 Credits**

Critical assessment of current and predicted energy resources used by humans, including their origins, distribution, environmental impacts, and feasibility. Lectures, discussion, field trips. May be combined with EES 022 or EES 004 for 4 credits.

**Attribute/Distribution:** CC, NS, NW

### **EES 027 Natural Hazards: Impacts and Consequences 3 Credits**

Earthquakes, volcanoes, tsunamis, floods, and hurricanes are a natural part of the Earth and our environment. These events have violent consequences for our lives and significant economic implications. This course examines the causes, predictability, and risk mitigation for these events. We will also consider how natural disasters are represented by popular media and whether this helps or hurts public understanding of our dynamic planet and our relationship to it. May be combined with EES 022 or EES 004 for 4.

**Attribute/Distribution:** CC, NS, NW

### **EES 028 Conservation and Biodiversity 3 Credits**

An introduction to the science of conservation biology. We examine the evolution of biodiversity on earth, spatial patterns of biodiversity, the impact of human activities on biodiversity, and assess strategies for the management and conservation of biodiversity. Students gain the scientific literacy necessary to make informed decisions about topics such as wilderness preservation, species conservation, and land use. May be combined with EES 022 or EES 004 for 4 credits.

**Attribute/Distribution:** CC, NS, NW

### **EES 029 Human Health and the Environment 3 Credits**

An introductory course that explores the connections between the environment and human health. Topics related to human health include climate change, energy production, genome-environment interactions, zoonotic disease, and drinking water chemistry. Introduction to the disciplines of geochemistry, ecology, geospatial data analysis, environmental epidemiology, toxicology, risk assessment, and exposure science. Course format includes a combination of lectures on fundamentals and seminar style topical readings. May be combined with EES 022 or EES 004 for 4 credits.

**Attribute/Distribution:** CC, NS, NW

**EES 032 (BIOS 032) Oceanography 3 Credits**

An introduction to the structure, composition, and processes of the earth from a marine perspective. Topics include earth structure, plate tectonics, continental margins, coastal processes, seawater chemistry, ocean circulation, wave dynamics, primary productivity, plankton and plants, marine organisms and communities. May be combined with EES 022 or EES 004 for 4 credits.

**Attribute/Distribution:** NS, NW

**EES 033 Life from Stardust 3 Credits**

An examination of the history of planet Earth and the development of life. Includes the formation of Earth and the evidence for changing conditions in the inter-connected geosphere, hydrosphere, atmosphere, and biosphere over the past 4.5 billion years, and theories for the origin and early evolution of life. Discuss the tools used for the search for life on other planetary bodies, both in our solar system and around other stars. May be combined with EES022 or EES004 for 4 credits.

**Attribute/Distribution:** NS, NW

**EES 034 Global Changes, Microbial Forces 3 Credits**

This course investigates how microbes that are invisible to the naked eye play highly influential roles in global environmental change. We will explore these phenomena in terrestrial and aquatic systems, from urban to remote regions. We will conclude by examining ways to harness the power of microbes to combat facets of global change. May be combined with EES 022 or EES 004 for 4 credits.

**Attribute/Distribution:** CC, NS, NW

**EES 072 Topics in Earth and Environmental Science 1-4 Credits**

Study of topics in earth and environmental science not covered in other introductory courses. Primarily used for transfer credit. Consent of instructor required.

**Repeat Status:** Course may be repeated.

**Attribute/Distribution:** CC, NS, NW, Q, W

**EES 075 Lehigh Launch: Water and Watersheds in the American West 2 Credits**

Water issues in the American West often make the nightly news, and the western drought is often described as a worst-case climate change scenario. This course examines water quality and contamination issues, use and management of watersheds, the impact of floods and droughts, and the effect of climate change on water management. This course is a field-intensive lab course. For Lehigh Launch students only.

**Attribute/Distribution:** LS, NS, NW

**EES 076 Lehigh Launch: Western Wildlife and Conservation Biology 2 Credits**

In this course, grounded in the field of conservation biology, students will learn about the natural history and survival science for a variety of wildlife in the Intermountain West. Scientific analysis, exploration and observation throughout the course will offer students an opportunity to learn about native and non-native species, historical and current management issues, and how humans and wildlife intersect in the American West. This is a place-based course. For Lehigh Launch students only.

**Attribute/Distribution:** CC, NS, NW

**EES 080 Introduction to the Earth System 0,4 Credits**

Study of the earth system, including the atmosphere, biosphere, geosphere, and hydrosphere and their interactions (e.g., plate tectonics, biogeochemical cycling, climate, anthropogenic impacts). The course is designed to prepare students for a major in EES and includes a lab that develops important skills including data analysis, modeling, use of maps and geospatial data, and field work. Lectures and lab. Open to declared EES majors and minors. Also open to intended majors and others by departmental permission.

**Attribute/Distribution:** CC, NS, Q, W

**EES 091 Special Topics 1-4 Credits**

Intensive study of a topic of special interest not covered in other 0-level course.

**Repeat Status:** Course may be repeated.

**Attribute/Distribution:** CC, NS, NW

**EES 093 Freshman Supervised Internship in Earth and Environmental Sciences 1-2 Credits**

Experiential learning opportunities supervised by EES faculty, including fieldwork, data collection or analysis, literature review, and information management. A maximum of two credits is allowed. Consent of supervising faculty required.

**Repeat Status:** Course may be repeated.

**Attribute/Distribution:** CC, Q, W

**EES 102 Environmental Science and Sustainability 0,4 Credits**

An examination of how the Earth and environment sustain human health and well-being, how our actions support and conserve or disrupt and deplete natural systems and resources, and how environmental impacts are distributed globally and socioeconomically. Focus on scientific inquiry, quantitative reasoning, evidence based decision making, cultivating curiosity, and the challenges and opportunities of living sustainably. Active learning and case studies. Required for registration: completion of at least 1 credit of any EES course.

**Attribute/Distribution:** CC, LS, NS, NW, Q

**EES 103 SEEDS: Sustainability Education and Environmental Development for Students 1 Credit**

Experiential learning in education, outreach, and service. Theory and practice translating Earth & Environmental Science knowledge and skills in support of K-12 science standards, participatory community science, and science communication to diverse audiences. Students gain experience with learner centered, inquiry based approaches to learning; creating inclusive learning environments; collaboration, mentorship, and leadership.

**Repeat Status:** Course may be repeated.

**Attribute/Distribution:** NS, NW

**EES 115 Surficial Processes 0,4 Credits**

An introduction to process geomorphology and sedimentology that emphasizes the dynamic interactions of climate, tectonics, and watershed hydrology on the erosional, transportational, depositional, and biological processes that shape landscapes. Includes a field and computer-intensive lab.

**Prerequisites:** EES 080

**Can be taken Concurrently:** EES 080

**Attribute/Distribution:** NS, Q, W

**EES 131 Introduction to Rocks and Minerals 0,4 Credits**

Hand-specimen identification of the major mineral groups and rock types. Atomic structure of minerals; relationship of mineral structure to chemical and physical properties. Placement of igneous, sedimentary, and metamorphic rocks into a plate tectonics context. Introduction to optical mineralogy and x-ray diffraction techniques. Lectures, laboratories, field trips.

**Prerequisites:** EES 080 or (EES 021 and EES 022)

**Can be taken Concurrently:** EES 080

**Attribute/Distribution:** CC, NS, NW

**EES 152 Ecology 0,4 Credits**

The study of relationships among organisms and their physical environment. Ecology of individual organisms, populations, communities, ecosystems, landscapes, and the biosphere. Topics include organism adaptations and natural selection, life histories, population growth and dynamics, species interactions, energy flow, nutrient cycling, and ecological impacts of human activities. Field-based laboratories focus on the quantitative study of biological populations and communities. Lectures, field-based laboratories, and applied activities.

**Prerequisites:** EES 025 or EES 028 or EES 080

**Can be taken Concurrently:** EES 025, EES 028, EES 080

**Attribute/Distribution:** CC, NS, NW, Q

**EES 191 Special Topics 1-4 Credits**

Intensive study of a topic of special interest not covered in other 100 level course.

**Repeat Status:** Course may be repeated.

**Attribute/Distribution:** CC, NS, NW, Q, W

**EES 200 Earth History 0,4 Credits**

Review of the coevolution of Earth, life, climate, and the environment, and introduction to the records used to constrain this history. The course addresses environmental changes at both geologic and human time spans. Includes laboratory exercises and field trips.

**Prerequisites:** EES 080

**Attribute/Distribution:** NS, W

**EES 201 Seismology: The Earth and Environment 0,4 Credits**

An examination of how earthquakes and active source seismology are used to understand the Earth beneath our feet. Fundamentals of seismic wave propagation in the Earth. Study of earthquakes, and reflection and refraction techniques at a variety of scales: near-surface, crustal, lithospheric, and whole Earth. Practical applications to both earth and environmental science, experiment design, data collection, processing, analysis and interpretation. Field and laboratory projects.

**Prerequisites:** EES 080 and EES 115 and EES 131

**Can be taken Concurrently:** EES 115

**Attribute/Distribution:** NS, Q, W

**EES 223 Structural Geology and Tectonics 0,4 Credits**

Material behavior of rocks and the architecture of the Earth's crust. Introduction to rock mechanics, crustal deformation, and plate tectonic processes. Lectures, laboratories, numerical modeling, and fieldtrips.

**Prerequisites:** EES 115 or EES 131

**Can be taken Concurrently:** EES 131

**Attribute/Distribution:** NS, Q, W

**EES 250 Forest Ecology 0,4 Credits**

The study of forested ecosystems around the globe. Topics include abiotic and biotic drivers of forest diversity, forest dynamics and structure, and human impacts and management. Laboratory/field activities foster practical skills such as plant identification, experimental design, data collection, data analysis in Excel and R, data visualization, oral communication, and scientific writing. Lectures, field-based laboratories, and applied activities.

**Prerequisites:** EES 115 or EES 152

**Attribute/Distribution:** Q, W

**EES 291 Special Topics 1-4 Credits**

Intensive study of a topic of special interest not covered in other 200 level courses.

**Repeat Status:** Course may be repeated.

**Attribute/Distribution:** CC, NS, NW, Q, W

**EES 293 Supervised Internship in Earth and Environmental Sciences 1-4 Credits**

Individual or group internship supervised by EES faculty. May include data collection, analysis, literature review, information management, and sharing of results.. Student and supervisor agree on work plan and credits. Maximum of four credits of EES 293 and no more than eight credits combined from EES 093, EES 293 and 393 may be applied to EES B.A. and B.S. degrees. Written report or presentation at the undergraduate symposium required for projects of 3 or more credits. Consent of supervisor required.

**Repeat Status:** Course may be repeated.

**Attribute/Distribution:** CC, NS, Q, W

**EES 300 Apprentice Teaching 1-4 Credits**

Supervised participation in various aspects of the teaching of a course. Consent of instructor, department chairperson, and permission of the Dean required.

**Repeat Status:** Course may be repeated.

**EES 306 Geologic Records of Environmental Change 3,4 Credits**

Overview of geologic records of changes in Earth's climate and environment, how these records are produced and interpreted, and how they can be applied to a variety of disciplines. Exploration of diverse archives and proxies, with a focus on terrestrial and marine sediments, age model construction, time series analysis, uncertainty quantification, and correlation of records. A class project will use acquisition and analysis of geochemical data to demonstrate how records of climate and environmental change are constructed and interpreted.

**Prerequisites:** EES 080 and EES 115

**Attribute/Distribution:** NS, Q

**EES 316 (CEE 316) Hydrogeology 0-4 Credits**

Water plays a critical role in the physical, chemical, and biological processes that occur at the Earth's surface. This course is an introduction to surface and groundwater hydrology in natural systems, providing fundamental concepts and a process-level understanding using the hydrologic cycle as a framework. Geochemistry will be integrated to address natural variations and the human impact on the environment. Topics covered include: watershed hydrology, regional and local groundwater flow, water chemistry, and management of water resources. Lectures and laboratory.

**Prerequisites:** (EES 080 and EES 115 or EES 131 or EES 152) or (CEE 170)

**Can be taken Concurrently:** EES 115, EES 131, EES 152

**Attribute/Distribution:** NS, Q, W

**EES 318 Geographic Analysis in EES 0-4 Credits**

Techniques for acquisition, manipulation and integration of data in Geographic Information System (GIS) environment, with emphasis on statistical and spatial analysis. Traditional and digital maps, spatial data collection and integration, geodesy concepts and time series analysis will be applied to case studies and projects relevant to Earth sciences, environmental sciences, and other disciplines according to the diversity of the audience. Different OS platforms and software will be used throughout the course. Includes lectures and laboratory exercises.

**Prerequisites:** (EES 080 and (EES 115 or EES 152), ) or ES 319

**Attribute/Distribution:** CC, NS, Q

**EES 320 (CEE 320) Engineering Hydrology 3 Credits**

Rainfall-runoff analysis, overland flow, hydrograph theories, modeling. Frequency analysis of extreme events. Flood routing. Design storms. Floodplain hydraulics, floodplain delineation.

**Prerequisites:** (CEE 222)

**Attribute/Distribution:** NS

**EES 323 (CEE 323) Environmental Groundwater Hydrology 3 Credits**

The study of subsurface water, its environment, distribution, and movement. Included are flow patterns, well hydraulics, and an introduction to the movement of contaminants. Design problems are included to simulate flow with analytical and numerical models, and contaminant migration using analytical models.

**Prerequisites:** CEE 122 or CEE 316 or EES 316 or ME 231 or CHE 044

**EES 325 Remote Sensing of Terrestrial and Aquatic Environments 0-4 Credits**

Techniques of observing the Earth from air- and space-borne instruments, including issues of geometry and scale associated with making measurements, electromagnetic properties of Earth surface materials, the range of instruments used to observe the Earth, image interpretation, and applications of satellite remote sensing to geological, ecological, and environmental questions. Lecture and lab.

**Prerequisites:** (EES 080 and (EES 115 or EES 152 or EES 131), ) or ES 319

**Attribute/Distribution:** CC, NS, Q

**EES 327 (CEE 327) Surface Water Quality Modeling 3 Credits**

Fundamentals of modeling water quality parameters in receiving water bodies, including rivers, lakes, and estuaries. Modeling of dissolved oxygen, nutrients, temperature, and toxic substances. Emphasis on water quality control decisions as well as mechanics and model building.

**Prerequisites:** (CEE 122 or ME 231 or CHE 044) and CEE 222

**EES 334 Geosphere Structure and Evolution 3,4 Credits**

Synthesis of the state of knowledge of Earth structure and long-term evolution, with emphasis on the crust and mantle, and integrating petrologic, geophysical, and geochemical perspectives. Mass and energy transfer through time among the crust, mantle, hydrosphere, biosphere, and atmosphere. Petrographic study of selected rock suites, and introduction to geophysical observations of the deep structure of the solid Earth. Lectures, discussion, laboratories, field trip.

**Prerequisites:** EES 080 and EES 115 and EES 131

**Attribute/Distribution:** NS, Q

**EES 341 Field Camp in Earth and Environmental Sciences 6 Credits**

Integrated, capstone field experience for Earth and Environmental scientists using the diverse natural settings of the Rocky Mountains as the classroom. Projects challenge students to synthesize field data in solving real science problems. Projects include but not limited to classic and computer-based geologic mapping, section measuring, structural analysis, stream hydrology, sediment transport. Five weeks in the field; summer session. Students must apply through the Lehigh Field Camp Program, consent of Field Camp director required. Must have declared major in EES.

**Prerequisites:** EES 131 and EES 115 and EES 223 and EES 316

**Attribute/Distribution:** CC, NS, Q

**EES 343 Climate and Earth System Modeling 4 Credits**

Introduction to the basic principles of meteorology and climate necessary to understand Earth system models and future global change. Students will use a range of software to provide hands-on experience with different types of models, ranging from Energy Balance Models (EBMs) to Earth System Models of Intermediate Complexity (EMICs), and Global Climate Models (GCMs) applied to the atmosphere, ocean, land surface, carbon cycling, and ice. Lecture and recitation.

**Prerequisites:** EES 080

**Attribute/Distribution:** CC, NS, Q

**EES 352 Aquatic Biogeochemistry 3,4 Credits**

Study of biogeochemical cycles in aquatic environments, investigating the abiotic and biotic factors that regulate microbial functions. Special emphasis will be on light, heat, carbon, salinity, nutrients (N+P), metals, dissolved gasses and their interplay with primary production and secondary production in various ecosystems. Organic and inorganic forms of microbial metabolism will be covered. Field and experimental methods, as well as data analysis, will be used to underscore critical principles in aquatic biogeochemistry.

**Attribute/Distribution:** NS, Q, W

**EES 357 Paleoecology and Landscape History 3,4 Credits**

Principles and methodologies of paleoecology, with emphasis on palynology. Applications of paleo-records in tracing flora, vegetation, climate and landscape history. Long-term ecological interactions and ecosystem responses to past environmental change. Field and laboratory experiences in collecting and characterizing sediments and in processing and interpreting fossil pollen and other proxy data. Students will explore regional vegetation, climate and landscape history by coring and analyzing sediments from lakes and wetlands. requires one or more weekend day-long field trips.

**Prerequisites:** EES 080 or EES 115 or EES 152 or EES 250

**Attribute/Distribution:** NS

**EES 358 Microbial Ecology 0-4 Credits**

The role of microorganisms in the environment. Topics include: Survey of microbial classification, diversity, structure, assembly, and metabolism; study of microbes at population, community, and ecosystem levels of organization; the roles of biotic interactions and abiotic parameters in driving the ecology and evolution of microorganisms; state-of-the-art methods to investigate complex microbial assemblages in terrestrial, marine, and subsurface environments; application of microbes to bioremediation and resource recovery problems.

**Prerequisites:** EES 152

**Attribute/Distribution:** CC, NS, W

**EES 363 Volcanology 0-4 Credits**

Volcanic eruptions can result in devastating effects on both a regional and a global scale. This course will examine physical dynamics that control eruptive processes at active volcanoes. Topics will include the role of volatiles, magma decompression, magma chamber and conduit dynamics, magma rheology, crystallization, fragmentation criteria, and transitions from explosive to effusive behavior. We will examine specifically how geochemical/textural analyses of volcanic rocks and minerals can provide quantifiable information on eruption processes.

**Prerequisites:** EES 131 and EES 115

**Attribute/Distribution:** NS, Q

**EES 376 Geochemistry of Natural Waters 0-4 Credits**

Introduction to aqueous geochemistry. Applications of thermodynamics, mass balance, systems science, and kinetics to understanding mineral-water interactions in natural aquatic systems on a variety of spatial and temporal scales. Laboratories emphasize analytical and computer methods. Lectures, and seminar/laboratory.

**Prerequisites:** EES 080 and EES 115

**Can be taken Concurrently:** EES 080

**Attribute/Distribution:** CC, NS, Q

**EES 379 (CEE 379) Environmental Case Studies 3 Credits**

Case studies will be used to explore the impact of politics, economics, society, technology, and ethics on environmental projects and preferences. Environmental issues in both affluent and developing countries. Multidisciplinary student teams investigate site characterization; environmental remediation design; environmental policy; and political, financial, social, and ethical implications of environmental projects.

**Prerequisites:** EES 022 or CEE 375 or CHE 375

**EES 380 The Practice of Science 1 Credit**

The knowledge, skills, and discipline of mind developed in the Earth and Environmental Sciences major present students with a number of opportunities and career paths. Students will explore a variety of career paths and further develop professional skills. The seminar explores strategies for applying to graduate school or for a job, professional ethics and responsibility, and the methods and process of effective communication. Must have EES Major and senior standing.

**Attribute/Distribution:** NS

**EES 386 Wetland Ecology 0-4 Credits**

Ecology of wetlands and factors controlling wetland structure and function. Responses and feedbacks of wetlands to natural and human-induced environmental variability. Topics include wetland classification and delineation, origin and development of wetlands, biotic adaptations to the wetland environment, wetland hydrology, wetland biogeochemistry and microbial communities, wetland vegetation dynamics, and wetland restoration. Lectures, laboratories, applied activities, and field trips.

**Prerequisites:** EES 152

**Attribute/Distribution:** NS

**EES 387 Sustainability in Latin America 3,4 Credits**

Seminar discussing issues surrounding environmental sustainability in Latin America and the Caribbean from a holistic, interdisciplinary perspective. Introduction to the three legs of sustainability and sustainable development theory, as well as the ecology and evolution of biodiversity in the American tropics. Use of published primary literature and podcasts to explore the particular complexities of Latin American sustainable development, and analysis of case studies in which environmental issues were either championed or de-emphasized. Readings, discussions, and one major project.

**Prerequisites:** EES 102

**Attribute/Distribution:** CC, W

**EES 391 Special Topics 1-4 Credits**

Intensive study of a topic of special interest not covered in other 300 level courses.

**Repeat Status:** Course may be repeated.

**Attribute/Distribution:** CC, NS, NW, Q, W

**EES 393 Supervised Research in Earth and Environmental Sciences 1-4 Credits**

Individual student research guided by faculty, including a research proposal. If three or more credits are applied to a single project it must be presented at the undergraduate research symposium with the option to also write a thesis. Both the proposal and thesis are filed with the EES Department. No more than eight credits may be applied to EES B.A. and B.S. degrees (additional credits apply to free electives). Committee optional, but required for department honors.

**Repeat Status:** Course may be repeated.

**Attribute/Distribution:** CC, NS, Q, W

**EES 402 (EVST 402) Scientific Foundations for Environmental Policy Design 3 Credits**

This course explores the science behind the environmental issues that bear on policy process at local, national and global scales. The course delves into the science of selected environmental issues that have either arisen from anthropogenic activities, that impact social systems, or that help policy-makers understand the consequence of different policy options. The course consists of readings and discussions of timely topics and one major project.

**EES 403 Earth System Modeling 3 Credits**

This course will introduce the concepts behind computer modeling, including deterministic vs stochastic, stocks and fluxes, finite differencing, initial and boundary conditions, sensitivity, feedbacks, calibration, validation, and uncertainty. We will apply these ideas to projects of interest to students in the course, and may include any of the components of the earth system. Students will learn both agent-based and systems dynamics modeling using NetLogo, Stella, and Excel, simple programming with C++, and research-oriented models as their independent research projects allow.

**Repeat Status:** Course may be repeated.

**EES 405 Paleo- and Environmental Magnetism 3 Credits**

Topics in paleomagnetism and environmental magnetism. Class will design and conduct a research project, read the relevant literature and write a research paper. Consent of instructor required.

**EES 407 Seismology 3 Credits**

Seminar on advanced topics in seismology, review of classic and current literature. Topics include but are not limited to: wave propagation in ideal media and earth materials, seismic imaging of complex structures, tomography, modeling, and high-resolution seismic imaging. Must have completed an introductory geophysics course.

**EES 411 Physical and Chemical Processes at the Earth's Surface 3 Credits**

An advanced treatment of physical and chemical processes and their interaction in the critical zone. Quantitative methods, modeling, and process-oriented approaches are presented in a systems context from the meter, to watershed, to continental scale. Topics include weathering and soils, chemical and physical fluxes from watersheds, and global hydrology and erosion.

**EES 412 Advanced Fluvial and Tectonic Geomorphology 3 Credits**

Lecture, seminar, lab, and field-based investigation of the classic and contemporary geomorphologic literature using the processes and evolution of a watershed and its dynamic interaction with tectonics as a integrative common theme. Topics change according to student interest but typically include active tectonics, fluvial processes, landscape response to climate, and biogeomorphology. Include ArcGIS training, field trips, flume analogue modeling, and class projects with the goal of a published paper.

**EES 414 Glacial and Quaternary Geology 3 Credits**

Study of the origin, distribution, and movement of present and past glaciers. Special emphasis on glacial land forms and deposits, Quaternary stratigraphy and dating techniques, periglacial phenomena, and Pleistocene environments. Lectures and required field trips. Consent of instructor required.

**EES 415 Paleoclimatology 3 Credits**

Overview of climate system, including energy budget, feedbacks, atmospheric and ocean circulations, and their interactions. Earth's climate history and mechanisms of past climate variations at various time scales, with emphasis on late Quaternary. Lectures, presentations and discussion of recent literature, especially on approaches to studying climate change and paleo-perspectives on ongoing climate change. Must have graduate standing in EES, or consent of course instructor.

**Repeat Status:** Course may be repeated.

**EES 426 Tectonic Processes 3 Credits**

Current models of tectonic processes in intraplate settings and at plate boundaries. Critical evaluations by the class of the geological, geochemical and geophysical data sets which gave rise to these models. Must have graduate standing in EES, or consent of department chairperson.

**EES 427 Orogenic Belts 3 Credits**

Geometry, kinematics, and mechanics of orogenic belts. will explore current paradigms of depositional, deformational, and metamorphic processes in the Earth's crust. Lectures, seminars, and field trips. Topically variable Consent of instructor required.

**Repeat Status:** Course may be repeated.

**EES 429 Methods and Applications of Geochronology 3 Credits**

Examination of isotopic techniques used to measure geologic time, and their applications. Lectures, laboratories, research projects, field trips. Must have graduate standing in EES.

**Repeat Status:** Course may be repeated.

**EES 438 Petrogenetic Processes 3 Credits**

Metamorphism, melting, and magmatism in the Earth's crust and mantle. Tectonic evolution, crust-mantle heat and mass transfer, fluid-rock interactions, and rate processes. Varying combinations of lecture and seminar formats. May be repeated for credit when topics differ. May include laboratory and field experience and computational exercises. Consent of instructor required.

**Repeat Status:** Course may be repeated.

**EES 446 Human-Climate Interactions 3 Credits**

This course explores climatic impacts of human activity, along with feedbacks between climate change and the land/sea surface, hydrology, productivity, etc., in the context of assessing both the causes and societal consequences of climate change. Such consequences include storm frequency, SSTs, floods/droughts, sea level rise, etc. Emphasis is placed on understanding the processes controlling climate response greenhouse gases, land cover, and land-atmosphere / ocean-atmosphere mass and energy exchanges.

**EES 453 Advanced Microbial Ecology 3 Credits**

Lectures and seminars will focus on topics of current interest in the microbial ecology of pelagic (freshwater and marine), sediment, and/or soil environments. Emphasis will be placed on the role of microbes in ecosystems level processes such as energy transformations and elemental cycling. May include laboratory and field exercises. Must have graduate standing or consent of course instructor.

**EES 457 Advanced Remote Sensing of the Environment 3 Credits**

Seminars and hands-on, quantitative analysis of specialized satellite and aircraft data, including microwave and hyperspectral sources, will be used to investigate significant environmental questions. Students will refine visual and technical skills for image interpretation, digital image processing, change detection of environmental systems, and presentation of spatial data. Required research project. Must have graduate standing in EES or consent of the instructor.

**EES 459 Reconstructing Environmental Change 3 Credits**

Lectures, seminars, and in-depth discussion on current issues and selected topics in Quaternary paleoecology and paleoclimatology. Survey of techniques in studying and reconstructing environmental changes and biological responses. Use of multiple proxy data from paleo-archives (e.g., ice cores, lake sediments) to address nature of past climate variability. Quantitative analyses of paleo-records to test paleoecological hypothesis (e.g., multivariate analysis) and to infer possible causes and forcing mechanisms of past climate change (e.g., time series analysis). May include field and laboratory exercises.

**EES 471 Stable Isotope Chemistry - Theory, Techniques, and Applications in Earth and Environmental Sciences 3 Credits**

Distributions of stable isotopes (primarily of O, H, C, S, and N) in the lithosphere, hydrosphere, biosphere, and atmosphere. Topics include mechanisms of fractionation and mixing, advancements in techniques for extractions and mass spectrometry, and recent applications of stable isotopes in the earth and environmental sciences. Lectures, seminars, laboratory sessions. Consent of instructor required.

**EES 473 Aqueous Geochemistry 3 Credits**

Advanced study of the equilibria and kinetics of chemical reactions occurring at the earth's surface. A review of concepts in geochemistry including activity, solubility, thermodynamics, kinetics, and oxidation-reduction reactions is followed by readings from the literature. Topics covered depend on student interest, and have included chemical weathering, chemical evolution of surface and groundwater, acid mine drainage, trace element chemistry, biogeochemical cycles, and ocean chemistry. Must have graduate standing in EES or consent of instructor.

**Repeat Status:** Course may be repeated.

**EES 477 Chemical and Geological Oceanography 3 Credits**

This course will investigate the pathways that chemical species follow on their transit through the world's oceans, and related geologic processes. Fundamental principles will be combined with quantitative approaches to construct mass balance models across boundaries including the atmosphere, rivers, groundwater, and hydrothermal systems. Chemistry topics, including seawater composition, isotope tracers, ocean circulation, carbonate chemistry and biogeochemical cycling, will be linked with geology topics, including sedimentation and the formation of basaltic crust of the seafloor via igneous petrogenesis and volcanism.

**EES 484 Ecosystem Processes 3 Credits**

Theoretical and experimental approaches to investigate ecosystem processes at local, regional, and global scales. Emphasis on interactions among physical, chemical, and biotic components of ecosystems. Must have graduate standing in EES.

**EES 485 Advanced Topics in Geophysics 1-6 Credits**

Intensive study of topics in geophysics not covered in more general courses.

**Repeat Status:** Course may be repeated.

**EES 490 Thesis Research 1-6 Credits**

Masters' thesis research directed by research committee. 3-6 credits required for EES M.S. programs. Consent of research advisor required.

**Repeat Status:** Course may be repeated.

**EES 491 Investigations in Earth and Environmental Sciences 1-3 Credits**

Research on a special problem; field, laboratory, or library study; report required. Credit above three hours granted only when a different problem is undertaken.

**EES 492 Advanced Topics in Modern and Quaternary Processes 3 Credits**

Intensive study of topics in modern and Quaternary geology not covered in more general courses.

**Repeat Status:** Course may be repeated.

**EES 493 Advanced Topics in Tectonics 1-6 Credits**

Intensive study of tectonic processes and products not covered in more general courses.

**Repeat Status:** Course may be repeated.

**EES 494 Advanced Topics in Ecosystem Ecology 1-6 Credits**

Intensive study of ecosystem processes not covered in more general courses.

**Repeat Status:** Course may be repeated.

**EES 496 Advanced Topics in Geochemistry 1-4 Credits**

Intensive study of geochemical processes not covered in more general courses.

**Repeat Status:** Course may be repeated.

**EES 497 Advanced Topics in Paleoecology and Paleoclimatology 1-3 Credits**

Intensive study of paleoecology and paleoclimatology not covered in more general courses.

**Repeat Status:** Course may be repeated.

**EES 499 Dissertation Research 1-15 Credits**

Ph.D. dissertation research directed by research committee. Consent of research advisor required.

**Repeat Status:** Course may be repeated.
